

"Following is the provisional list of applications received for provisional enlistment of products on FORM-6A with the Division of Medical Devices & Medicated Cosmetics, Drug Regulatory Authority of Pakistan, Islamabad under provision of SRO 32(I)/2018 dated 16-01-2018. The processing of these applications under provisions of above said SRO will be dealt on First Come First Serve basis as per sequence of date mentioned against each application.

DISCLAIMER:

The contents of this list shall not be used as reference for any purpose including litigation, claim, right, research, citation, statistical analysis, etc and are for information only. Errors and omissions are accepted and at provisional stage the DRAP shall not be responsible for any legal claim and liability"

APPLICATION FOR THE GRANT OF REGISTRATION OF CLASS A MEDICAL DEVICES

Albert Browne Indicators

Sterility Assurance Products

BROWNE Spiral Load Check (No
Counter and No Indicators) -
AB123

VH202 Process Indicator
BOX/200 - 2501AB

Indicator Steam Multivariable
(BOX OF 240) - 2551AB

Porous & Hollow Steam
Penetration Test - AB101

Class:A

Shelf Life

Product Identifier	Shelf Life
AB123	400 cycles
2501AB	15 Months
2551AB	24 Months
AB101	24 months or 400 cycles

Albert Browne Indicators are sterility assurance products intended for use inside individual packs, trays or pouches or as Process Challenge Device to provide assurance of the sterility activity.

It is the consistency of paste but it is used more like a caulk than a glue or an adhesive. The caulk like paste is used to fill in uneven skin contours to help create a flatter surface. A flatter surface is important because the Ostomy wafer will adhere better if it is completely flush against your abdomen. The Ostomy wafer will not stay in place if there are gaps between the wafer and your skin. If there are gaps, the Ostomy wafer can become dislodged completely or it can start to leak. Ostomy paste, like many Ostomy supplies, is meant to increase the wear time of your Ostomy system while protecting your skin from the stoma output. Stoma paste which is, in fact, a caulk, not a paste, is an adhesive used to fill in skin contours that are uneven, creating a flatter more consistent surface to which a stoma wafer can bind.</p>	<p>1921-R&I 19.02.20200 5,000/- 142-K-DD(MD) 19.02.2020</p>

Stoma powder is not made of the same type of powder that is found in baby powder or body talc. They should not be used interchangeably. Stoma powder is to be used around a stoma which is the result of an Ostomy surgery. Stoma powder can be used with a colostomy, ileostomy, and/or Urostomy. By absorbing moisture the stoma powder can help the Ostomy barrier/flange to adhere better while allowing the skin around the stoma to heal. Ostomy stoma powder is not meant as a skin protectant and it will not prevent irritation. It is only meant to be used to absorb moisture from skin that is moist to the touch due to irritation. Stoma powder is also known as stoma adhesive powder, or periosteal skin protection.</p>	<p>1918-R&I 19.02.20200 5,000/- 143-K-DD(MD) 19.02.2020</p>

It is treated with chlorine which is to facilitate the user in donning the glove and as well as to prevent the glove surface from sticking to each other. It protects the hand or part of the hand of the user. The main function of wearing gloves is to protect the wearer against contamination of infectious materials particularly viruses, bacteria, infected blood and body fluids. Thus, the single most important criterion in gloves selection is barrier protection, as defined by all users, including physicians, dentists, medical and non-medical workers and researchers.</p> <p>INTENDED USE</p> <p>The Non-Sterile Nitrile Examination Gloves, Powder Free is a medical device intended to protect the hand or part of the hand of the user. It is intended for single use only.</p> <p>The Non-Sterile Nitrile Examination Gloves, Powder Free are usually used for conducting</p>	<p>4418-K.R&I 13.03.2020 5,000/- 247-(K) F-6-A DD (MD 13.03.2020</p>
